WHAT IS DURADECK?
A temporary composite plastic mat that is used to create roadways and work platforms over muddy and/or sensitive surfaces.
DuraDeck is used to:
• Get heavy equipment to a job site
• Protect your vehicles and equipment in muddy and unstable ground conditions
• Improve safety for employees
• Reduce post project site remediation and clean-up
• Create a temporary road and stable working platform on any type of terrain – mud, sand, marshy areas, etc.
• Ideal alternative to plywood

WHAT DOES DURADECK DO?
DuraDeck is an ideal ground protection solution. Use DuraDeck wherever you would use plywood. **DuraDeck prevents ground damage caused by heavy equipment and saves you time and money by preventing ground remediation after work is done.** DuraDeck also increases worksite safety by keeping personnel and equipment on a stable, non-slip surface in wet and muddy environments.

USES FOR DURADECK
Common worksite locations and customers:
• Construction Sites
• College/School Campuses
• Cemeteries
• Front/Back Yards
• Parks
• Golf Courses
• Transmission Projects
• Landscaping projects
• Temporary sites (mobile homes, trailers, offices)
• Outdoor Special Events (concerts, plays, festivals, staging needs)
• Arborists/Tree Care
• Structural movers
• Water drillers
• Septic tank companies
• Heavy Haul
• Over concrete

FREQUENTLY ASKED QUESTIONS

Where do I use DuraDeck?
Anywhere you have ever used plywood. Install over any unstable or sensitive surface including muddy, wet, sandy, or grassy conditions.

How much weight will DuraDeck hold?
80 tons on a firm subsurface. As a general rule DuraDeck supports 250 psi. On soft surfaces, DuraDeck weight load will vary depending to the type of soil.

If I lay DuraDeck over concrete will it disperse the weight to protect the concrete? Yes.

What if oil, gas or hydraulic fluid gets on DuraDeck?
Liquids and contaminates will not penetrate the mat and can easily be cleaned with dry absorbent material. DuraDeck will not cross contaminate work sites.

Why is DuraDeck better than plywood?
DuraDeck lasts longer, distributes weight better, will not splinter/crack, will not absorb water or contaminants, is much stronger, and can be reused for years.

How long will DuraDeck last?
DuraDeck is extremely durable with a 7-year warranty. DuraDeck can be cleaned and easily transported for multiple uses.

How do you install DuraDeck?
Simply lay down mats and use steel connection plates or temporary links to lock DuraDeck pieces together.

BENEFITS OVER PLYWOOD

• Portable and durable enough for years of use and for hundreds of projects
• More cost-effective than plywood because it lasts for over 7 years
• Will not rot or splinter and can be stored outside in all types of weather
• Protects vehicles & equipment from excessive wear and damage due to unstable ground conditions
• Surface traction prevents slippage and provides added personnel safety
• Saves time and labor costs, increasing efficiency
• Eliminates environmental cross-contamination problems associated with plywood sheets
• Will not warp, expand, or contract do to use or environmental exposure
